

ACO StormBrixx® - HD

Case Study

Eden Apartments, Perth, WA

The suburb of Floreat, eight kilometres from Perth's CBD, has been experiencing a surge in construction of small boutique apartment buildings. Eden Apartments combines luxury apartment living with resort style amenities, including a swimming pool, spa, gym and yoga studio.

Project Design Brief

In order to slow the stormwater runoff from the site to The Town of Cambridge Council requirements, the project's designers needed to incorporate an underground storage tank. Designers needed the tank to be quick and simple to assemble and enable easy access for inspection and cleaning.

ACO's Solution

- **StormBrixx® HD** 41m³ geocellular stormwater tank

Benefits

- **StormBrixx®** tanks are assembled with a snap-lock system for easy handling and rapid installation
- The unique pillar configuration provides a high void ratio of 97% for maximum storage
- Maintenance and inspection points allow access to the tanks interior
- Independently certified for structural integrity for long-term strength
