

Side panel and top cover – StormBrixx® SD

Installing the side panel

Polypropylene side panels are added to the perimeter of the tank to give lateral support against surrounding soils. The side panels have cutting guides which can be cut out using a jigsaw for the connection of plastic pipes.

Installing the top cover

Polypropylene top covers are added to the top layer of the tank to fill the openings of the pillars and to ensure consistent support for the cover fill material.

Note: Top covers are only placed in the top layer of the tank before the geomembrane and/or geotextile is wrapped around them.
